

Methods

We indexed a private reference corpus and retrieved passages for a known query token nfr7probe.

Each uploaded file was parsed, split on IMRaD headings, then windowed inside a section as 384-dime

Additional methods detail: sampling, inclusion criteria, and how section labels come from headings rat

Results

A retrieval hit on nfr7probe must return a chunk from this fixture, not an unrelated document.

Generation must refuse citation ids that were not in the retrieved set.

This paragraph exists so the fixture is longer than the minimum ingest chunk size used by upload_pro

Additional results detail: overlap with the probe token, embedding dimension, and that empty files are
